Summary

Backend engineer with 1.5+ years building production systems in Python across payments, authentication, and platform infrastructure, alongside applied AI work with LLMs, RAG, and agentic tooling. Strong problem solver with high agency, comfortable owning problems end to end, and a quick learner across new domains and stacks.

Experience

Vetic Gurgaon, India

Software Development Engineer I June 2026 – Present

Software Development Intern April 2025 – June 2026

- Scaled multi-vendor payment processing across Razorpay, PayU and Pine Labs, handling **80K+ monthly transactions** and improving payment adherence from **90% to 99.7%**.
- Developed PAi, a **multi-agent RAG** chatbot built on **LangChain** resolving **1000+ customer queries daily**.
- Automated the reconciliation and cash-closing system, cutting daily clinic closing time from **2 hours to 5 minutes**.
- Built a DSL-based rules engine with configurable appointment exemptions, reducing revenue leakage to **near 0%**.
- Centralized authentication across **15+ services** through **pyvetic**, a shared Python backend library.
- Enhanced app booking workflows for membership and add-on sales with dynamic coupon application, supporting **7% membership** and **33% add-on** attach rates.
- Hardened security across the **entire Vetic platform** via API gateway, secrets removal, private storage, and authenticated access controls.
- Improved backend reliability with distributed locking, DB transactions, connection pooling, caching, and async database clients.
- Defined backend architecture and coding standards for a large-scale refactor, including phased migration, testing, and release practices; introduced AI-assisted development workflows.

Mentorpal AI Remote, India

AI Intern June 2024 – July 2024

- Developed a Chrome extension generating personalized LinkedIn outreach messages using LLMs.
- Built an internal resume QA tool using LangChain and LLMs, improving QA efficiency by **40%**.

Projects

Pair Programmer (pp) | Python, OpenRouter, MCP GitHub

- Built an agentic CLI coding assistant with a rich TUI for codebase exploration, reasoning, and autonomous code modification, using a tool-augmented architecture with subagents and MCP server support.
- Implemented persistent sessions, hooks, and a provider-agnostic LLM layer via OpenRouter.

Git Chat | FastAPI, Weaviate, MongoDB, LangChain GitHub

- Engineered a RAG system for conversational Q&A over public GitHub repositories using LLMs.
- Designed a FastAPI backend with Weaviate (vector search), MongoDB (metadata), and LangChain (retrieval).

Skills

- **Languages & Frameworks:** Python, Go, C++, FastAPI, Django, Flask, Gin
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
- **Infrastructure:** Docker, AWS, Linux, Git, RabbitMQ, Grafana, Loki, Prometheus
- **AI:** LLMs, RAG, MCP, Agentic systems

Achievements

- **ICPC** Asia West Amritapuri 2023 Regionalist
- LeetCode **1968** (Knight) | CodeChef **1684** (3★), Global Rank **159** in Starters 155
- **Winner**, Hack KRMU 3.0 (100+ teams)

Education

B.Tech, CSE, Dronacharya College of Engineering 9.0 CGPA | 2022 – 2026
