Education

Degree/Certificate	Institute/Board	CGPA/Percentage	Graduation
B.Tech - CSE	Dronacharya College Of Engineering	9 CGPA	June 2026
Senior Secondary	Manav Rachna International School	96.0%	May 2022
Secondary	Manav Rachna International School	97.6%	May 2020

Experience

Software Development Engineer I | Vetic, Gurgaon, India June 2026 – Present

- Engineered **centralized authentication** in pyvetic and migrated **15+ backend services**, standardizing access control and eliminating duplicated authentication implementations.
- Defined **standardized backend architecture and coding practices** for a large-scale refactor, establishing a phased approach to **migration, testing, and iterative releases** across codebases.
- Strengthened backend infrastructure security by implementing **private object storage and VPC isolation** across backend systems.
- Reduced **production release time** from **20s to 12s (40% faster)** by pre-building the pyvetic wheel, eliminating its runtime build overhead.

Software Development Intern | Vetic, Gurgaon, India April 2025 – June 2026

- Scaled **payment processing pipelines** by integrating Pine Labs and Razorpay, handling **80K+ monthly transactions**, improving payment adherence from **90% to 99.7%** and reducing billing mismatches by **40%**.
- Architected an automated **clinic day-closing and revenue reconciliation system**, reducing processing time from **2 hours to 5 minutes** while enabling systematic detection of revenue leakages.
- Built a **config-driven DSL rule engine** for appointment exemptions, using declarative rule files with multiple operators to enforce outcomes, reducing revenue leakage to **0%** while enabling non-code rule updates.
- Implemented **Redis-based distributed locking, MongoDB transactions, rate limiting, multi-layer caching, and asynchronous processing** with RabbitMQ and Cron jobs to improve backend reliability and correctness under concurrent workloads.

AI Intern | Mentorpal.ai June 2024 – July 2024

- Developed a Chrome extension generating personalized LinkedIn outreach messages using LLMs.
- Built internal resume QA tool using LangChain and LLMs, boosting QA efficiency by 40%.

Projects

Pair Programmer (pp) [GitHub](#)

- Built an **agentic CLI coding assistant** with a rich TUI, enabling interactive codebase exploration, reasoning, and autonomous code modification using LLMs.
- Designed a **tool-augmented agent architecture** supporting **subagents, MCP servers**, and extensible tool integrations for structured multi-step coding workflows.
- Implemented **persistent sessions, hooks**, and a **provider-agnostic LLM interface** with streaming responses and dynamic model selection, enabling extensibility and long-running interactive coding sessions.

Git Chat [GitHub](#)

- Engineered a **RAG-based system** enabling conversational question answering over public GitHub repositories using LLMs.
- Designed a **multi-model backend architecture** with FastAPI, integrating **Weaviate (vector search), MongoDB (metadata)**, and **LangChain (retrieval orchestration)**.

Achievements

- ICPC Asia West Amritapuri 2023 Regionalist
- LeetCode: **1968** (Knight), CodeChef: **1684** (3★)
- Global Rank **159** in CodeChef Starters 155
- Qualified GATE 2025 — DA (AIR 702), CS (AIR 3050)

Skills

- Languages & Frameworks** - Python, Go, C++, FastAPI, Django, Flask, Gin
- Databases** - PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch
- Infrastructure & DevOps** - Docker, AWS, Linux, Git, Grafana, Loki, Prometheus, RabbitMQ
- Misc** - REST APIs, LLMs, RAG, MCP, Agentic AI
